DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-37 are rejected under 35 U.S.C. 102(b) as being anticipated by Young et al (US 5,749,547).

Young et al discloses an apparatus for controlling a model train, on a track, comprised of a hand held remote control having a plurality of push button selection devices, shown in figure 2. The remote control generates digital messages based on the selection device pressed by the user. The digital message is sent from the handheld controller to a transmitter 14, connected between the controller and the track, which then sends the signal to the track to be received by the train's receiver 26. The push buttons on the remote control the speed and direction of the train as well as various sounds. A wheel 36 on the remote control is moved to adjust the signal to the transmitter so as to control the speed of the train. The transmitter is operated by first and second resistors coupled to respective capacitors, as shown in figures 8 and 11. A series of transistors are also coupled in the circuit with the resistors and capacitors. The push buttons on the remote control act as electromechnical relays to send a signal and the transmitter sends the signal as a DC offset so as to be received by the train's

Art Unit: 3617

receiver 26. The remote control is further capable of operating a plurality of trains by using the number key pad on the remote control to switch between the various trains.

Regarding claims 31 and 37 drawn to the method of controlling a train. Young et al discloses the same structure, as described above, as those features recited in the present invention. It is inherent that Young et al would use the same method for operating the system.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert J. McCarry, Jr. whose telephone number is (571) 272-6683. The examiner can normally be reached on Monday through Friday 7:00am to 3:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, S. Joseph Morano can be reached on (571) 272-6684. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
